Phishing Incident Response Report

Date: 08 April 2026
Analyst: SOC Team

---

1. Executive Summary

On 08 April 2026, a phishing email campaign targeted employees by impersonating an internal IT notification. One user interacted with the malicious link and entered credentials into a spoofed login page. The Security Operations Center (SOC) detected suspicious activity and promptly isolated the affected endpoint. Immediate response actions prevented lateral movement and minimized organizational impact.

---

2. Timeline

Timestamp	Event Description
2025-04-07 13:45:00	Phishing email delivered to user
2025-04-07 13:55:00	User clicked malicious link
2025-04-07 13:58:00	Credentials entered on fake login page
2025-04-07 14:00:00	Endpoint isolated by SOC
2025-04-07 14:30:00	Memory dump collected
2025-04-07 15:00:00	User credentials reset
2025-04-07 15:30:00	Malicious domain blocked
2025-04-07 16:00:00	Incident contained

---

3. Impact Analysis

- **Affected System:** One employee workstation
- **Type of Attack:** Phishing leading to credential compromise
- **Data Exposure:** Potential exposure of user credentials
- **Business Impact:** Minimal due to rapid detection and containment
- **Risk Severity:** Medium

---

4. Remediation Steps

- Isolated the compromised endpoint from the network
- Reset and secured affected user credentials
- Blocked malicious URLs and IP addresses at the firewall and email gateway
- Conducted full endpoint and network scans for additional indicators of compromise (IOCs)
- Reviewed authentication logs for unauthorized access attempts
- Updated email filtering and anti-phishing rules
- Notified users and initiated awareness communication

---

5. Lessons Learned

- Strengthen email security filtering to detect phishing attempts earlier
- Implement Multi-Factor Authentication (MFA) to reduce credential abuse risk
- Conduct regular phishing simulation exercises for employees
- Improve monitoring and alerting for suspicious login behavior
- Enhance incident response playbooks for faster containment
