

High Severity Alert Auto Escalation

Logic

```
Trigger: New alert received

Condition:
IF severity == "High"

Actions:
- Assign case to Tier 2
- Add tag "Escalated"
- Update status to "Escalated"
- Send notification to Tier 2 team

Else:
- Keep alert with Tier 1
```

Workflow (visual explanation)

```
Start
↓
Alert Received
↓
Check Severity
↓
[IF High]
  → Assign to Tier 2
  → Add Tag "Escalated"
  → Update Status
  → Send Notification
[ELSE]
  → Continue Tier 1 Investigation
```

Test with a Mock Alert

- Create a mock alert

```
Alert Name: Unauthorized Access Detected
Source IP: 192.168.1.200
Severity: High
Time: 2025-08-18 13:00
```

- **Apply your playbook logic**

Now “run” the playbook manually:

Input:

Severity = High

Result:

- Alert assigned to Tier 2
- Tag "Escalated" added
- Status updated to "Escalated"
- Notification triggered
