

Post-Incident Analysis Report

Objective

The objective of this task is to perform a Root Cause Analysis (RCA) of a phishing incident, identify contributing factors, and evaluate SOC performance using key metrics such as MTTD and MTTR.

Tools Used

- Google Sheets (RCA documentation, metrics)
 - Draw.io (Fishbone Diagram)
-

Root Cause Analysis (5 Whys Method)

Question	Answer
Why was the email opened?	User clicked a malicious link
Why was the link clicked?	Email appeared legitimate and urgent
Why did it appear legitimate?	Lack of advanced email filtering
Why was filtering weak?	Outdated security rules and no sandboxing
Why were controls outdated?	Lack of regular security updates and audits

Fishbone Diagram (Cause Analysis)

Categories Identified

1. People

- Lack of security awareness training
- User unable to recognize phishing indicators

2. Process

- No phishing simulation exercises
- Weak incident reporting procedure

3. Technology

- Ineffective email filtering
 - No attachment sandboxing
 - Missing URL reputation checks
-

4. Policy

- No enforced email security policy
- Lack of mandatory training compliance

5. Environment

- High email volume causing user fatigue
 - Remote work increasing exposure
-

SOC Metrics Calculation

Given:

- Detection Time = 2 hours
- Response Time = 4 hours

Metrics:

- **MTTD (Mean Time to Detect):** 2 hours
 - **MTTR (Mean Time to Respond):** 4 hours
-

Metrics Summary (50 words)

The incident analysis revealed a Mean Time to Detect (MTTD) of 2 hours and a Mean Time to Respond (MTTR) of 4 hours. While detection was relatively quick, response time indicates room for improvement. Enhancing automation and alert prioritization can significantly reduce response delays and improve SOC efficiency.
